

# E-Learning/Mobile-Learning and Performance Dashboard on GCP

Solution provider and Deliver for GCP provisioning.

## The challenge

When service center teams across nations simultaneously accessed the E-Learning/Mobile-Learning (Vinning) on-premises repository, performances went down, and services ran below expectations. With 75 different topics video on-demand, VisioNet was looking for a new system platform to improve its performance, scaling instantly to serve 1700s of users concurrently and better user experiences.

## The solution

Google Cloud Platform is the perfect infrastructure solution to serve front-end system, providing maximum benefits of greater bandwidth, better scalability, and flexibility in sizing to serve the peak time, efficient in daily operation as well as cost optimization, while data can remain on-premises (hybrid system) for maximum flexibility and control.

## The results

Improved user experiences during peak time, giving liberty to VisioNet team from day-to-day operations and maintenance activities (like on-premises system), reducing the Total Cost of Ownership without an upfront investment.

“ We had spent great investment and did maintenance activities by our-own, while on GCP we have plenty of time to focus more on core business. Simplifying our daily operation and decreasing the Total Cost of Ownership. We are glad our end-users have better user experiences now to access corporate training repository even at the peak-time. ”

Verdi Anjarezqie, Head of IT Application Managed Service Division, PT Visionet Data Internasional

About PT Visionet Data Internasional (VisioNet)

PT Visionet Data Internasional (VisioNet) is a Digital IT Managed Services Company, offers national coverage in more than 140+ points spread throughout Indonesia, focuses in supporting and managing IT operations (for optimal performances, reliability, and effectiveness) allowing customers to focus on their core business.

Industry: Business & Professional Services

Primary project location: Indonesia

About PT MULTIPOLAR TECHNOLOGY Tbk  
Prominent System Integrator in Indonesia since 1975, partnering up with Google in accelerating digital transformation journey.
